

Internet of Things

IoT-things Process

1. Data is collected from an internal and/or external network of varied and numerous animate and/or inanimate objects (things).
2. This data is then sent to the 'Tilda-E-things Server' where the information is stored in the database.
3. Information retrieved from the database is consolidated via a graphical user interface on an internal and/or external website and viewed via numerous connected devices i.e. PC, laptop, tablet and mobile.
